Connecting to the BYOD network
Mobile Devices (phones, tablets)

Each device/operating system/computer has its own method of connecting to networks, and may have firewall/filter/malware software installed that may introduce problems with the connection process. These guidelines are intended to be a general example of how to access our network. If you are unable to get connected via these instructions you may have to contact your device manufacturer’s technical support, or your own support resources to connect to the network. The district tech support team will be unable to assist with configuring personally owned devices.

1. Use the Wi-Fi software on your device to connect to the network named “BYOD”

2. After connecting to BYOD your web browser may open automatically. If it does not open your web browser. If it does not automatically open then open your web browser and make sure it opens a window that looks like this.

3. Click on the link “Please click here to connect to the network”

1 This process may be different for any device, refer to instructions that came with your device if you need help.

2 If you do not see the window pictured go to the address: https://10.22.110.21 in your web browser
4. After a moment of processing you should get to the JLSD WiFi Registration page. **Type in polarbear\username and password** (the same that you use to login to a district computer).

    note: make sure you use the backslash.

    for example:

    a staff member with the username abc2jc would type polarbear\abc2jc

    a student with the username abstudent0101 would type polarbear\abstudent0101

5. You will be prompted to enter in your first and last name, and check the box to agree to the Acceptable Use Policy.

    **note that the check may appear light gray before you select it. Tap on the check to darken it.**

    Once finished, click “Complete Registration”.

6. Once you have successfully registered you should get a message stating that Network access is granted.

    **note, you may have up to 2 registered devices on the BYOD network. Please wait until one of your existing devices registration expires before adding an additional device.**

    Devices registrations expire every 30 days, after that time you may need to reregister your device.
