

SLO PRE/POST-TEST: Review

Match the following Theorists with their findings or ideas. Put the correct letter in the space provided.

- | | |
|----------------------|--|
| _____ Sigmund Freud | A. Said that children learned by imitating others. Both behavior and environment affects development. |
| _____ Jean Piaget | B. Personality develops in stages. Thought each stage includes a unique psychological crisis. If that crisis is met in a positive way, the individual develops normally. |
| _____ Albert Bandura | C. Experiences in childhood profoundly affect adult life. |
| _____ Erik Erikson | D. Argued that when a child's actions have positive results, they will be repeated. Negative results will make the actions stop. |
| _____ B.F. Skinner | E. The first to study children scientifically. Focused on how children learned. Believed children go through four stages of learning. |

Matching- For each of the following statements, match the definitions to the birth defect choices below
