Circular Cross Sections

The only thing that changes when the cross sections of a solid are circular is the formula for A(x). Many such solids are solids of revolution, as in the next example.

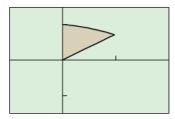

EXAMPLE 2 A Solid of Revolution

The region between the graph of $f(x) = 2 + x \cos x$ and the x-axis over the interval [-2, 2] is revolved about the x-axis to generate a solid. Find the volume of the solid.

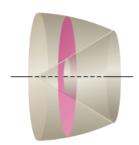

EXAMPLE 3 Washer Cross Sections

The region in the first quadrant enclosed by the y-axis and the graphs of $y = \cos x$ and $y = \sin x$ is revolved about the x-axis to form a solid. Find its volume.

 $[-\pi/4,\,\pi/2]$ by $[-1.5,\,1.5]$
